AFRL technologies displayed at exhibition

WASHINGTON, D.C. – Lt. Gen Ronald E. Keys, right, deputy chief of staff for Air and Space Operations at U.S. Air Force headquarters, discusses a directed energy technology with Maj. Ken Pascoe and Kathy Rehm at the Air Force Research Laboratory's exhibit during the Air Force Association's Aerospace Technology Exposition, held the week of Sept. 15. Pascoe and Rehm, from the laboratory's Directed Energy Directorate at Kirtland Air Force Base, showcased two technologies: one that can detect and identify hidden weapons, and another that can turn away enemy troops with a beam of energy that creates pain without causing damage.
